Subject: ET Analyses

Warren Winterson has requested that PTL determine the levels of glycerin and total reducing sugars in ET produced at the MC. This request will involve the evaluation of 20 samples, for glycerin and total reducing sugars, every two weeks. Warren will get the samples over to PTL. A ten day turn-around time for obtaining the results is requested. The data will be reported back to Warren. This testing will proceed for several months after which time the need for continued testing will be evaluated.
